If you need a simple PowerPoint to DVD converter, that will provide a clean conversion with no extras, but will take a DVD Burner to handle, DVDShow for PowerPoint is just the ticket. The program converts the PowerPoint file, preserving all the original data and the transitions. It does not duplicate the audio tracks, so you should not expect to hear the same audio tracks on the DVD as you did on the original PowerPoint presentation. Simple conversion tool for PowerPoint presentations Working with the application is very intuitive, as it does not have many options and menus for you to go through. It displays a compact one-window interface that comprises all the settings in the simplest way possible. There is a field that enables you to select the Powerpoint file to use as a source, alongside another that you can use to select the location of the DVD folder to burn. On the downside, drag and drop actions are not possible, so you will have to settle for the standard explorer window to choose the input. Convert to PAL or NTSC, with 16:9 or 4:3 aspect ratio Although poor in configuration options, DVDShow for PowerPoint does allow you to choose between PAL and NTSC conversion modes for the output video, and customize the aspect ratio (16:9 and 4:3 are the two alternatives in this case). Half of the main window of DVDShow for PowerPoint is occupied by the preview area, but this failed to work properly during our tests. You can also monitor the total progress of the conversion from the loading bar within the main window, although an estimation of the remaining time is not displayed. Converts Powerpoint presentations to DVD videos only Although it comes with a look that might seem slightly outdated and a limited amount of options, the functionality of DVDShow for PowerPoint is well-intended and might fancy to users. The application promises to duplicate the original presentation exactly as it is and preserve the graphics, the attached audio tracks, and the transitions. However, it would have been better if the input presentation could have been converted to a locally-stored video as well, and not necessarily a DVD. Designed specifically to convert PPT to MP4 or MP3 audio file, DVD Player for PowerPoint is a powerful converter that will allow you to add MP3 or WMA audio tracks to PowerPoint presentations.
