While standard practice to get people excited about upgrading is to release a final version a few months before the end of its term, Adobe has instead created a “Living Update” system, with more frequent updates, and the ability to modify that frequency to suit your needs—or stop infrequent updates. You can set your own schedule, from weeks pass—with a new window opening to suggest and update the PSD as soon as you open it—to every minute. Adobe is curating access to controlled preview samples, and it's today releasing not just its first PS 2023 previews, but also previews of its Windows workflows, creating a new Creative Cloud interface for those on Mac, iPads, and the web. It is on to the final part of our rating system. In this case, we wanted to test Adobe's latest update to Photoshop, the latest Lightroom, and the latest version of Bridge. Unfortunately for Lightroom, the verdict is not in our favor as we have to give it only 3 stars. First of all, we were disappointed that Adobe left out the Export feature that allows you to save images to a specific format, e.g. JPG. It can be easily implemented if you wish to simply use the Export format immediately, but you will not be able to alter the settings and then using import again. I do believe that those who use Photoshop almost exclusively for image exports, such as myself, may appreciate this feature if we download the PSD images to a separate folder and move them afterwards. However, it is rather strange

that these features were left out considering the current state of Lightroom and the options of Exporting for Photoshop itself. Finally, the only thing truly beneficial for Adobe's Lightroom is the Split Toning module. It offers the really simple and great method of toning while Exposure and Color are left untouched. With all this said, I believe that Lightroom has its place in the market and I consider it a good alternative to Photoshop, especially for beginners. For professionals and for those who just want to create some touchups and edits, Photoshop is a much better choice. Based on that, we would have to give Lightroom only 2 stars.

“For the past 30 years, Photoshop has been the standard for visual desktop editing,” said Shantanu Narayen, CEO at Adobe. “Nowadays, we all expect more from our shared experience. It’s no longer limited to a computer desktop, and people expect to access it from wherever, on

whatever device, watching videos, and perhaps interacting with it on screen. Even when working from applications like Safari and Chrome, users want to be able to have their work seamlessly available in desktop Photoshop. " To build on that evolving reality, Adobe is introducing some new workflows to help users effortlessly access and combine different work paths into one Photoshop document. These new workflows let users seamlessly open Photoshop documents from other applications such as browsers, other image editors and sites, even define a default work path (say an image editor with a well-known panel layout) so that starting an editing session in Photoshop is as easy as opening any other application.
