A: This is the equation of the line of best fit of the least squares. You may not be familiar with that; in fact it is not just the usual linear regression that you are probably familiar with. But it is a simple line with slope $y=x$ and y-intercept $x=0$, which is the solution to your question. Brasserie de la Tour d'Auvergne is a new café/restaurant coming to the Boulevard/NW Portland area in 2015. Brasserie de la Tour will have some French/Belgian traditional café menus, but also will be offering a full French & Belgian dinner menu. The menu is completely French, meaning a mix of traditional French dishes and some Belgian specialties, and the menu will include all the typical French & Belgian dishes. A couple of the dishes that will be available include: moules frites, terrine de foie gras, charcuterie, and olives stuffed with anchovies. The menu will also include French & Belgian desserts, wines from France & Belgium, and draft beer.The first season of Arrow will end with a two-

Q: How to serialize and deserialize a Type Object using BizTalk Dynamic Ports? I want to serialize and deserialize a Type Object, I want to use the result as a result of a BizTalk Host Config File. The next port will be the root port and the application is configured like this: The root port will serialize and deserialize the information and I want to get it back on the port that will invoke the next application. The next application will read the result of the root port and use it to do something else. I wrote an application that reads the serialized Type and I have used it successfully, but I want to get this information without going back to the server to read it, so I wanted to configure it with a port that allows me to get it without going back to the server. How can I read the serialized Type from the root port? Thanks in advance. A: I ended up using a different solution based on this post: How to read XML Type from XML Data Port on the same host I only have a single output port configured (as shown above) and the host is configured as shown in the following: I have configured the BizTalk Host Configuration as shown in the following, in the configuration of the host I have mapped the two

existing ports to the XML Ports (the dynamic ports are configured by BizTalk as a WSHTMapport), this is an example of the XML mapped to the dynamic ports: The first port sends me the XML I need and the second port expects it. Thanks. 2edc1e01e8
